Fire & Safety Training
Jalsa Salana

Jalsa Salana UK

Fire Safety Training

Learning Outcomes

- Have an understanding of the need for fire safety and the risks
- Understand elements involved in fires spreading
- Fire prevention
- Know the evacuation procedures
- Crowd control

Why do you think it is important to be aware about fire & safety?

Fire Safety Training

Why should you care

Camp Site, Mecca

Venue Type: Camp
Ignition: Camp
Fuel: Tents
Comments: Dry, closely placed tents, **400 deaths**

Thorpe Park, UK

Venue Type: Fairground
Ignition: Unknown
Fuel: Timber structure & fair rides
Comments: Evacuation strategy and fire service intervention resulted in no deaths

Boomtown Fair, UK

Venue Type: Car Park at music festival
Ignition: Cigarette stub striking dry grass stubble
Fuel: Dry grass, and cars
Comments: 82 cars were destroyed

Fire safety is of the highest importance in any event, to ensure safety of the participants and the protection of the site.

Fire protection systems and procedures are a legal requirement and need to be clearly understood to make us aware in the event of a fire.

Fire Safety Training

Why should you care

Before you watch the video, make a quick guess, how long do you think it takes for a fire to completely engulf a room?

Fire protection systems and procedures...

A) are only a requirement if there are more than 50 people in an event

B) are not legally binding

C) are a legal requirement

D) are only a requirement if there are more than 100 people in an event

Fire protection systems and procedures...

A) are only a requirement if there are more than 50 people in an event

B) are not legally binding

C) are a legal requirement ✓

D) are only a requirement if there are more than 100 people in an event

Fire Safety Training

Fire safety and the Law

- Fire safety is governed by the Regulatory Reform (Fire Safety) Order 2005.
- This means organisations, including those offering accommodation, must conduct a **fire risk assessment** and implement appropriate safety measures.
- These measures include having a working fire detection and warning system, clear escape routes, and fire-fighting equipment.
- Furthermore, responsible persons are legally required to **record the fire risk assessment and fire safety arrangements**.

Fire Safety Training

Fire Safety Order (2005) and Jalsa Salana UK

- Essentially, we will be conducting thorough, documented fire risk assessments in your nizamats.

- Fire & Safety marshalls will be conducting regular, routine assessments throughout the Jalsa

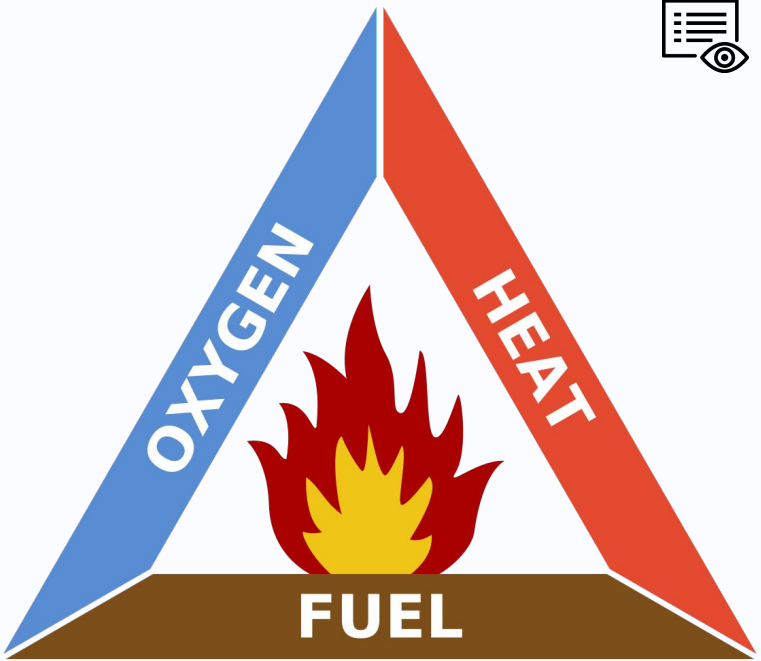
- However, it is **YOUR LEGAL** responsibility to be aware of potential fire and evacuation risks and to ensure safety.

What are the three things needed for a fire?

Discuss.

Nature of Fire

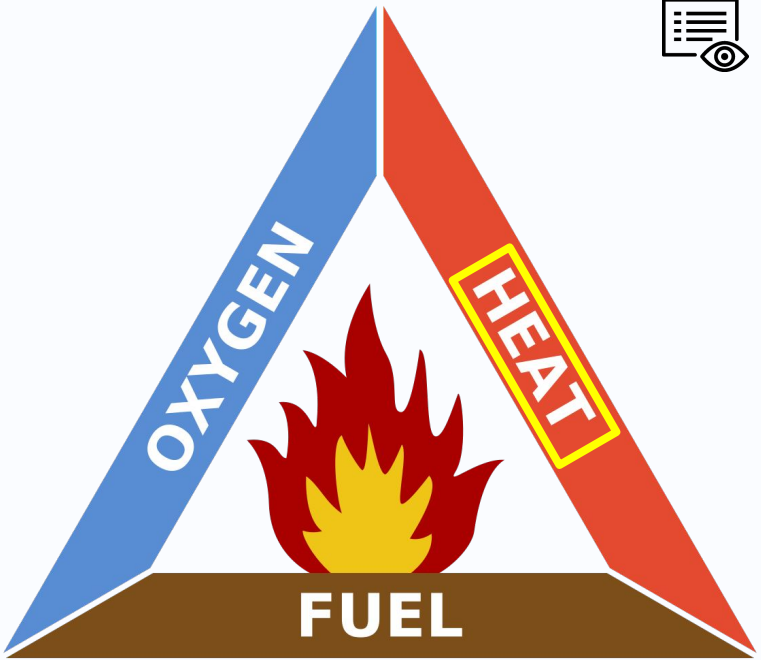
Understanding Fire - the fire triangle



- The fire triangle outlines the three components needed to ignite and sustain a fire.
- The three ingredients are; heat, fuel and oxygen.
- If just one of these components is removed, the fire triangle will collapse and the fire will be extinguished.

Nature of Fire

The fire triangle - Heat



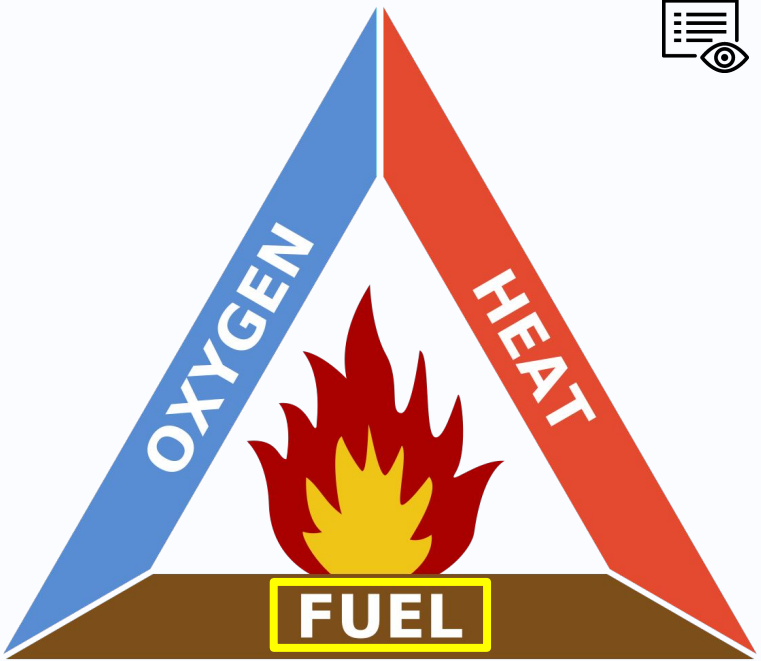
A source of heat is required in order for ignition to occur, and different materials have different ‘flash points’ e.g. the lowest temperature at which they ignite.

Unfortunately, combustion reactions also produce heat as they burn, further increasing the temperature of the fuel. For some types of fire, the heat can be cooled with the application of water.

Heat sources include: the Sun, hot surfaces, sparks, friction and electrical energy.

Nature of Fire

The fire triangle - Fuel



A fire cannot begin if there is no material to burn.

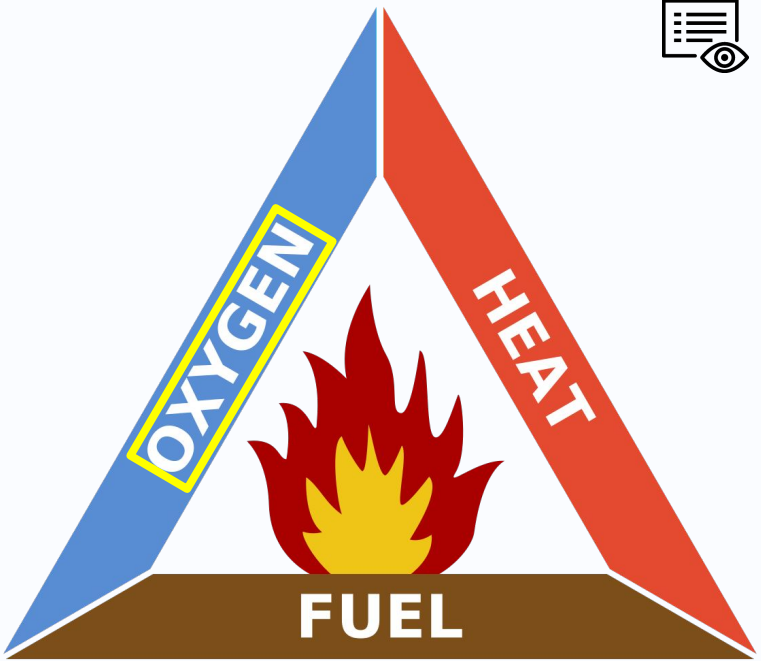
The Jalsa site is full of flammable materials, such as paper, oil, wood and fabrics. Any of these can serve as a fuel for a fire.

Some materials burn more easily than others. Fuels are probably the most difficult ‘side’ of the fire triangle to remove, so it’s wise to store them appropriately to prevent them becoming a fire hazard.

Fuel sources can be a solid, liquid or gas.

Nature of Fire

The fire triangle - Oxygen



To sustain the combustion reaction, oxygen is needed, as it reacts with the burning fuel to release heat and CO_2.

Earth's atmosphere consists of 21% oxygen, so there is plenty available to trigger a fire if the other two components are present.

Fire blankets and certain fire extinguishers remove the oxygen 'side' of the triangle by removing it or displacing it, causing suffocation and thereby ceasing the combustion reaction.

Remember, fuel may also contain oxygen.

Which of the following does not make up the fire triangle?

A) Fuel

B) Oxygen

C) Carbon dioxide

D) Heat

Which of the following does not make up the fire triangle?

A) Fuel

B) Oxygen

C) Carbon dioxide ✓

D) Heat

What is meant by the term “flash point”?

A) The highest temperature at which a material ignites

B) The lowest temperature at which a material ignites

C) The lowest temperature at which a material

D) The point at which a spark turns into a flame

What is meant by the term “flash point”?

A) The highest temperature at which a material ignites

B) The lowest temperature at which a material ignites ✓

C) The lowest temperature at which a material ignites

D) The point at which a spark turns into a flame

Nature of Fire

Prevention

Preventing a fire and maintaining the safety of the site and its participants is an utmost priority.

Be vigilant and religiously check your respective area and safety equipment. Apply your common sense!

The Khidmat-e-Khalq team is responsible for Fire Safety and Evacuation. The following are accountable (names given to the local council):

- Afsar KeK
- Naib Afsaran KeK
- Nazimeen KeK

A fire has broken out. Step by step, what would you do?

Discuss.

Evacuation

Fire Action Plan

At all times during your shift, be aware of your escape routes, and emergency numbers.

Familiarise yourself with the fire action plan:

1. Raise the alarm contact Command and Control (CoC).
2. Assess the intensity of the fire.
3. Talk to CoC to get instructions, ensure KeK team in your area is aware.
4. Evacuate people to the nearest Assembly point.
5. If trained and fire is small attempt to fight it.

Emergency Procedures Guideline

In the case of a fire or evacuation emergency you should:

- Raise Alarm
- Inform any person on duty and KeK control centre
- Leave the area by following the emergency exit signs
- Report to the nearest assembly point
- Do not re-enter the emergency area until instructed
- Do not stop to collect personal belongings

This is a **NO SMOKING** site. Smoking is strictly prohibited within the Main Venue area.

Evacuation

Emergency Services Contact

Contact with Emergency Services can only be made through Fire Safety Department, Naib Afsar and Afsar K-e-K

However, in the case of a serious incident or major fire, If instructed to do so, Call '999'.

Give clear and precise details of the incident.

Emergency Procedures Guideline

In the case of a fire or evacuation emergency you should:

- Raise Alarm
- Inform any person on duty and KeK control centre

- Leave the area by following the emergency exit signs
- Report to the nearest assembly point

- Do not re-enter the emergency area until instructed
- Do not stop to collect personal belongings

This is a **NO SMOKING** site. Smoking is strictly prohibited within the Main Venue area.

You see a fire has started in a marquee...what do you do first?

A) Raise the Alarm

B) You take this as a divine sign to act out your childhood dream of being a hero and run into the fire to put it out.

C) Leave the area immediately

D) Leave immediately, but make sure you grab your belongings

You see a fire has started in a marquee...what do you do first?

A) Raise the Alarm ✓

B) You take this as a divine sign to act out your childhood dream of being a hero and run into the fire to put it out.

C) Leave the area immediately

D) Leave immediately, but make sure you grab your belongings

You need to be aware of the common fire extinguishers and their uses.

Is there anything wrong with this?

Evacuation

Fire extinguishers

Around the Jalsa site you will find different types of fire extinguishers. **These will have been placed by the Fire & Safety team according to the fire hazards found in that area.**

Familiarise yourself with the table on the right which outlines which type of extinguisher is ideal for the type of fire.

For example, a “water” fire extinguisher is suitable for wood, paper & textiles based fires but unsuitable for any other type of fire.

Fire Extinguisher Type	CLASS A Wood, Paper & Textiles	CLASS B Flammable Liquids	CLASS C Flammable Gasses	CLASS D Flammable Metals	ELECTRICAL Electrical Contact	CLASS F Cooking Oils & Fats
	✓	✗	✗	✗	✗	✗
	✓	✓	✗	✗	✗	✗
	✓	✓	✓	✓	✓	✗
	✓	✗	✗	✗	✗	✓
	✗	✓	✗	✗	✓	✗

You can put out a wood and paper fire by...

A) Water Extinguisher

B) CO_2 Extinguishers

C) Fire blanket

D) All and any of the above

You can put out a wood and paper fire by...

A) Water Extinguishers ✓

B) CO_2 Extinguishers

C) Fire blankets

D) All and any of the above

Evacuation

Evacuation types

Any evacuation is a Safety & Security (KeK) issue.

In the event of an evacuation, there are two types:

1. Specific-area evacuation
2. Full-site evacuation

The type of evacuation depends on the incident scenario. There are two types of incident scenarios:

1. Minor incident e.g. a small fire within a marquee
2. Major incident e.g. the entire marquee is on fire, a bomb threat, major gas leak, etc.

Evacuation

Evacuation protocol

To conduct a successful evacuation you should assign members of your team to the following duties:

- **Directing Marshals**
- **Announcers**
- **Communicators in Radio contact**
- ***Site Sweepers***

Learn the evacuation procedure below:

1. Afsar KeK / Naib Afsar KeK / Fire Safety Officer will make a decision on the evacuation.

2. Ensure you know the announcer in your area.

3. Only follow instructions from your announcer.

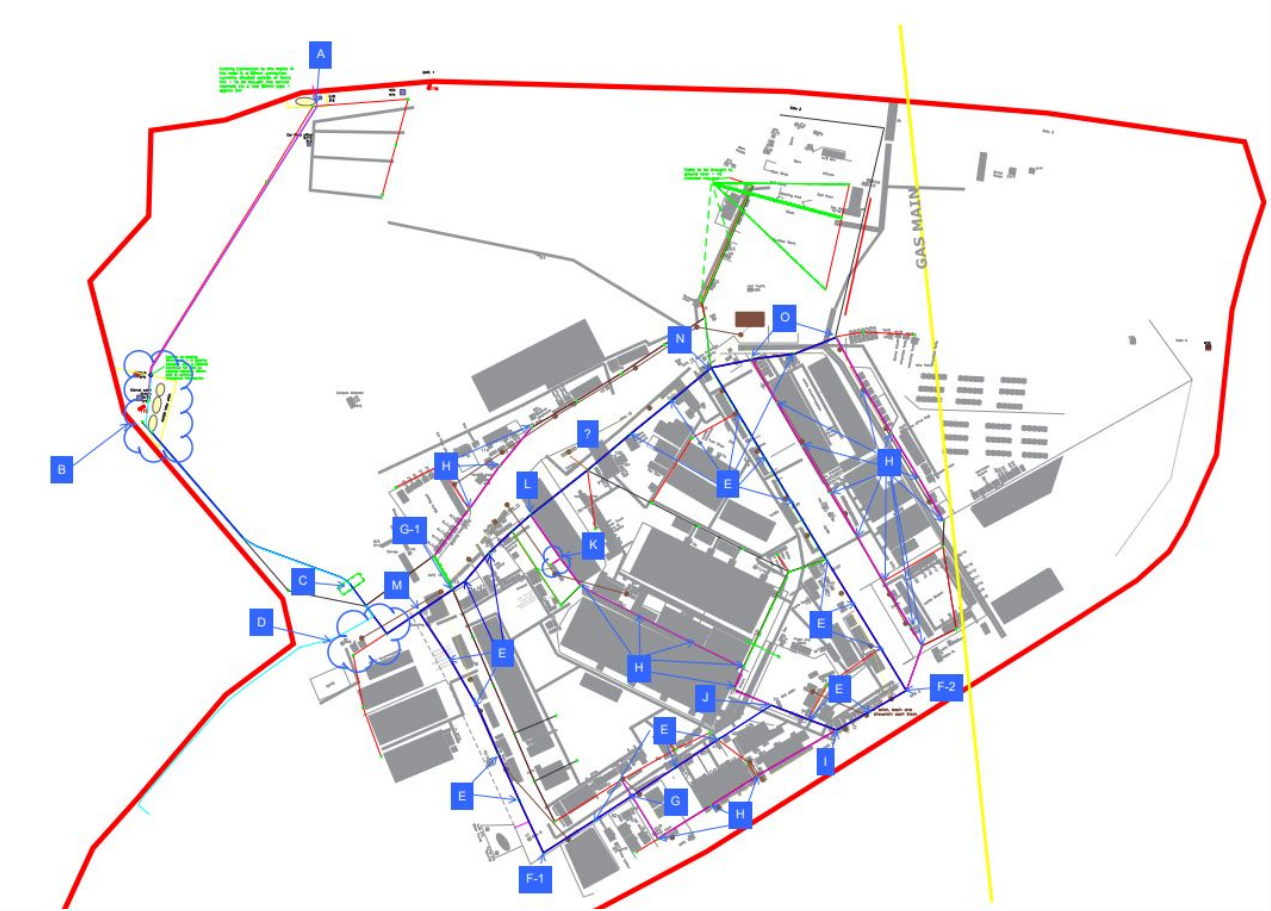
4. Wait for announcer to the Site Clear or All Clear instruction.

Site Clear: Evacuation completed, but no-one should return.

All Clear: Evacuation completed, area safe for people to return.

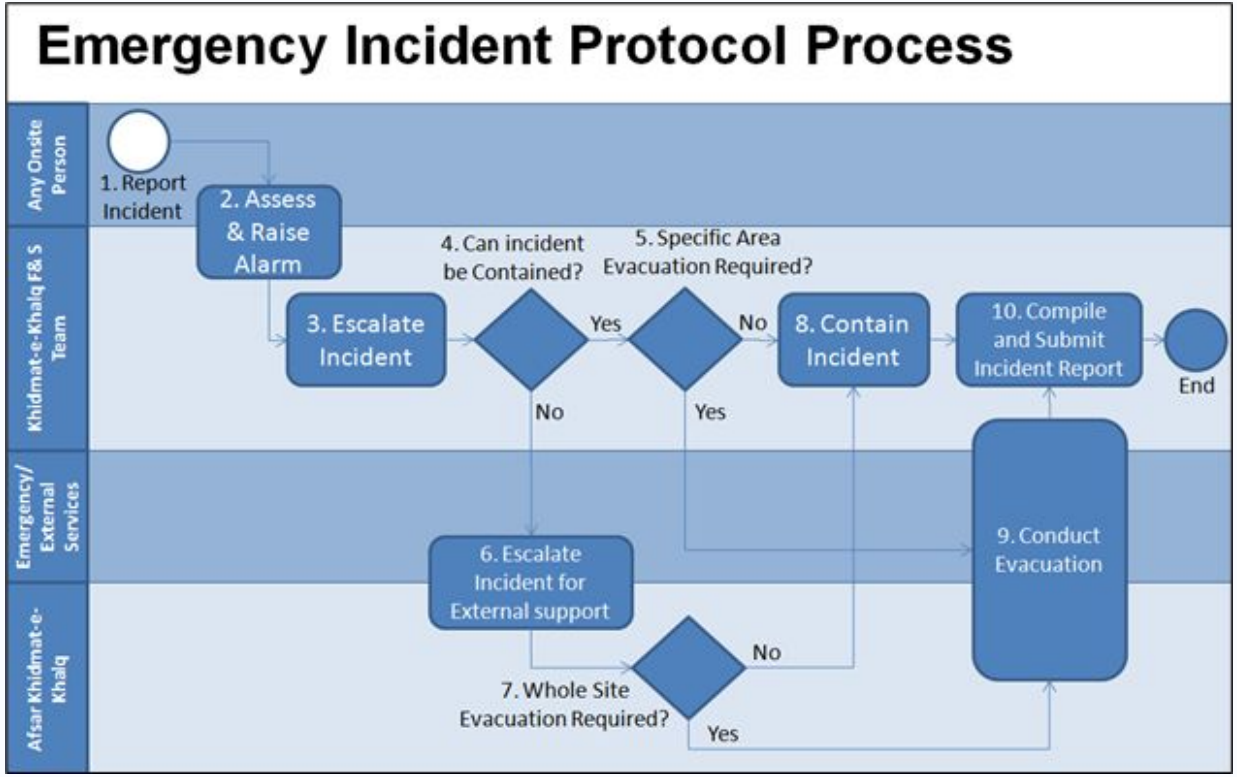
Evacuation Routes

Water hydrants



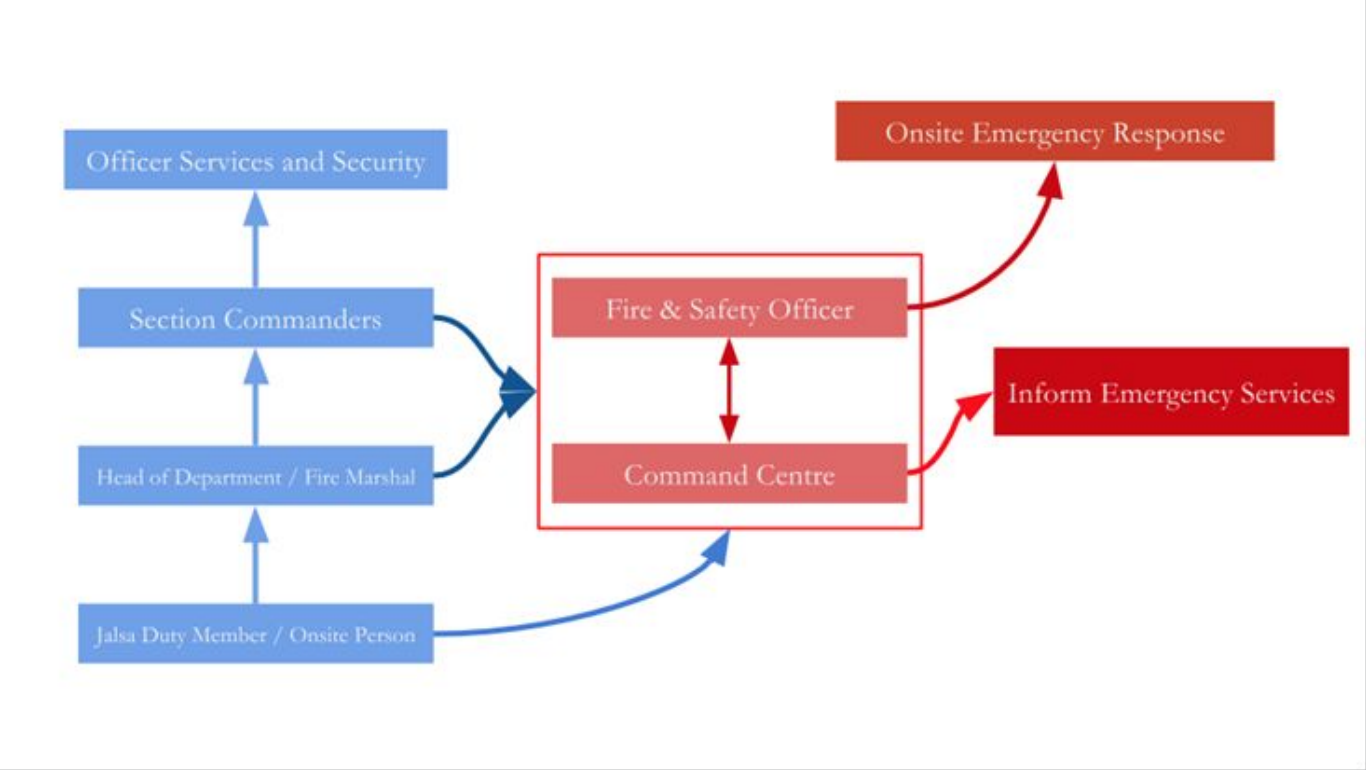
Evacuation

Emergency Incident Protocol



Evacuation

Emergency Incident Protocol



“Site Clear” means you can...

A) Site evacuated and inspected, everyone can return

B) Site evacuation completed but no one can return yet

C) All IMPORTANT people have left the site now.

D) The personal belongings have been take from the site. You can collect them from the F&S helpdesk.

“Site Clear” means you can...

A) Site evacuated and inspected, everyone can return

B) Site evacuation completed but no one can return yet ✓

C) All IMPORTANT people have left the site now.

D) The personal belongings have been take from the site. You can collect them from the F&S helpdesk.

For any jalsa member or worker, what is the first point of escalation protocol of an emergency?

A) Head of Department (Fire Marshall)

B) Fire Brigade

C) Command Centre

D) The Police,

For any Jalsa member or worker, what is the first point of escalation protocol of an emergency?

A) Head of Department (Fire Marshall) ✓

B) Fire Brigade

C) Command Centre

D) The Police,

An incident has occurred during lunch and large, restless crowds are gathering. You need to disperse the angry crowd. How would you approach this?

Discuss.

Evacuation

Crowd control - the three C's

Managing a crowd is equally as important as managing a fire. Remember the three C's: **calm, collectiveness and coherence.**

- Maintain **Calm**
  - Ensure team members behave appropriately
  - Give clear and regular instructions
  - Monitor Crowd Behaviour
- Ensure **Collectiveness**
  - Single Protocol: Ensure team members are briefed on evacuation Procedures
- Assure **Coherence**
  - Be Firm: Protocol is in place for everyone's safety
  - Take orders from CoC not the general public!
  - Body Language: e.g. posture/ hands out in front of you

Evacuation

Crowd control - important points

When managing a crowd, you need to be aware of the following:

- People may be in shock / require medical assistance
- People can become restless and turn violent
  - Use authority
  - Use body language/posture
  - Be polite, but firm
  - Maintain calm
  - Use reasonable force if absolutely essential (see SECO)
- Be Vigilant
  - Report any emerging incidents
  - Request additional support as early as possible
- Obvious Safety/Security Risks
  - Deal with these first and quickly!
  - Bear in mind evacuation of disabled people and children
- Be Resourceful
  - Use available equipment/people to form fencing/paths etc.

What are the three C's of crowd control?

A) Calm, Collectiveness and Coherence

B) Coolness, Loud and Coherence

C) Calm, Cohesive and Coherence

D) Combined, Calm and Cool

What are the three C's of crowd control?

A) Calm, Collectiveness and Coherence ✓

B) Coolness, Loud and Coherence

C) Calm, Cohesive and Coherence

D) Combined, Calm and Cool
